■ ABSOLUTE MAXIMUM RATINGS (Note 1)

PARAMETER	SYMBOL	RATINGS	UNIT
Supply Voltage	V_{DD}	6.0	V
Input Voltage	V_{IN}	-0.3 ~ $V_{DD}+0.3$	V
ESD Susceptibility (Note 2)	ESD	3500	V
ESD Susceptibility (Note 3)		250	V
Power Dissipation (Note 4)	P_D	Internally limited	
Junction Temperature	T_J	150	°C
Operating Temperature	T_{OPR}	-40 ~ +85	°C
Storage Temperature	T_{STG}	-65 ~ +150	°C

Notes: 1. Absolute Maximum Ratings indicate limits beyond which damage may occur. Operating ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which guarantee specific performance limits. This assumes that the device is within the operating ratings. Specifications are not guaranteed for parameters where no limit is given, however, the typical value is a good indication of device performance.

- Human body model, 100 pF discharged through a 1.5 kΩ resistor.
- Machine model, 200 pF discharged through all pins.
- The maximum power dissipation must be derated at elevated temperatures and is dictated by T_{JMAX} , θ_{JA} , and the ambient temperature T_A . The maximum allowable power dissipation is $P_{DMAX} = (T_{JMAX} - T_A) / \theta_{JA}$ or the number given in the Absolute Maximum Ratings, whichever is lower.

■ EXTERNAL COMPONENTS DESCRIPTION (Fig. 1)

COMPONENTS	FUNCTIONAL DESCRIPTION	
1.	R_i	Inverting input resistance which sets the closed-loop gain in conjunction with R_F . This resistor also forms a high pass filter with C_i at $f_c = 1/(2\pi R_i C_i)$.
2.	C_i	Input coupling capacitor which blocks the DC voltage at the amplifier's input terminals. Also creates a high pass filter with R_i at $f_c = 1/(2\pi R_i C_i)$.
3.	R_F	Feedback resistance which sets closed-loop gain in conjunction with R_i .
4.	C_S	Supply bypass capacitor which provides power supply filtering.
5.	C_B	Bypass pin capacitor which provides half-supply filtering.
6.	C_o	Output coupling capacitor which blocks the DC voltage at the amplifier's output. Forms a high pass filter with R_L at $f_o = 1/(2\pi R_L C_o)$.
